

2000th PALLETECH MANUFACTURING SYSTEM Shipped

In April 2012, a production milestone was reached when the 2000th PALLETECH MANUFACTURING SYSTEM was shipped to a customer in China.

Yamazaki Mazak has a long history in FMSs, starting with the MAZATROL FMS in 1984 and the PALLETECH which started production in 1993. These are designed to make unmanned operation possible to provide unsurpassed efficiency and productivity. By utilizing standard MAZAK machine tools integrated with pre-engineered material handling equipment, these systems feature fast delivery, compact floor space requirements, and convenient operation for an extremely reasonable investment. Additionally, the PALLETECH is designed for convenient system expansion after the initial installation in response to increased production requirements.

PALLETECH HIGH RIZE SYSTEM (3 levels)
